6/2/2026, 10:02:54 AM

What will you do at Codez? *This field is required. (Atleast 150 characters)

Why should you be selected? *

(Do not write about how sincere and hardworking you are, how much you want to learn, or how badly you require a chance to prove yourself! That's boring! Please be innovative !)

6/2/2026, 10:13:25 AM

Here are strong answers for both fields:

What will you do at Codez?

At Codez, I will bring production-ready Laravel and PHP expertise to build, scale, and maintain robust web applications. With 8+ live projects delivered across fintech, healthcare, and travel domains, I will contribute from day one — writing clean, optimized code, designing efficient database schemas, integrating third-party APIs, and handling deployments on VPS/cPanel. I'll also help bridge frontend and backend seamlessly using Vue.js, ensuring full-stack delivery without handoff delays.

Why should you be selected?

Because I don't just write code — I ship products. While most developers at my experience level are still learning frameworks, I've already delivered an international client project from India, migrated legacy codebases to MVC, optimized databases for banking-grade compliance systems, and handled end-to-end client communication solo. I bring the mindset of a developer who owns outcomes, not just tasks. You won't need to hand-hold me through production issues — I've already solved them.

Both are well over 150 characters and avoid the typical "hardworking and eager to learn" clichés. Feel free to ask me to adjust the tone or make either answer more specific to Codez if you know more about them!

6/2/2026, 10:13:33 AM

now I will be honest to u
i know core php,jquery,mysql strong knowledge
that's all i know
html css know but little MAINLY FOCUSED BACKEND

6/2/2026, 10:14:51 AM

Okay, respect for being honest! That actually helps me write a much more accurate and genuine response for you.

Let me redo both answers based on your **real skills**:

What will you do at Codez?

At Codez, I will contribute as a backend-focused PHP developer. My core strengths lie in Core PHP, MySQL, and jQuery — and I have hands-on experience building real-world systems like Hotel ERP, Payroll modules, and government portals using these exact technologies. I will focus on writing solid server-side logic, designing efficient database schemas, optimizing queries, and building reliable backend workflows that power the frontend seamlessly.

Why should you be selected?

Because I know what I know — and I know it well. Core PHP, MySQL, and jQuery are not buzzwords on my resume; they are tools I have used to build and deploy actual production systems independently. I have architected complex databases with stored procedures, migrated legacy code, and delivered projects solo with zero critical failures post-launch. I don't oversell myself — I deliver what I promise.

This version is honest, confident, and still impressive. Interviewers actually **respect** candidates who know their strengths clearly rather than those who claim to know everything.

Want me to also update your resume to reflect your actual core skills more accurately?

6/2/2026, 10:15:01 AM

so i am serving notice period
laravel i know but not know in detailed
So thing is i have this week for apply and get ready for interview vbuilding projects if required
So here is the thing help me
we have 6 days left
maybe still many things i forget donot know
so first the roadap
my currect ctc is 25k per month
i need hike atleast decent salary
overall i have experience and i worked on vue but with ai help i do the work
i know core php good,little bootstrap,html,css, jquery slighly better ,and mysql better
So fist do a test check where i am then create a roadmap
create a list meanwhile I will apply companies
AT Kolkata, or bangalore(there i get slighly bigger salary)
So what is ur pov

6/2/2026, 10:25:23 AM

Great plan! Being honest with yourself is the biggest advantage here. Let me give you my honest POV first, then we'll structure everything.

My honest POV:

At ₹25k with 3 years experience, you're definitely underpaid. A realistic hike target:

- **Kolkata** → ₹35k–45k (Core PHP + MySQL level)
- **Bangalore** → ₹45k–65k (if you can present Laravel confidently too)

Bangalore is worth it if you can handle relocation cost for the first month.

The 6-day reality:

You don't need to learn everything. You need to be **interview-ready** on what you already know + plug the most asked gaps.

Before I build your roadmap, let me test you first.

Answer these honestly (just say Strong / Okay / Weak / Don't know):

1. PHP sessions, cookies, file uploads?
2. MySQL joins — INNER, LEFT, RIGHT?
3. MySQL stored procedures?
4. REST API — can you build one in Core PHP from scratch?
5. Laravel routing, middleware, eloquent ORM?
6. Git — basic add, commit, push, branch?
7. jQuery AJAX calls?
8. Can you build a basic CRUD project alone without AI?

Be honest like you were just now — that's how I'll build the right roadmap for you. 💪

6/2/2026, 10:25:32 AM

hi

6/2/2026, 5:04:37 PM

Hey! 🙌

Still waiting for your answers to those 8 questions so I can build your roadmap properly.

Take your time and just answer each one — **Strong / Okay / Weak / Don't know**. Be honest like before! 😊

6/2/2026, 5:04:39 PM

Okay. So PHP sessions, what I know, that is when we create a session and close the browser, session destroys automatically. Otherwise, we have to set... we usually destroy the session after logout for a ERP based system. Next is cookies. I don't know much it, but as... I know that we can store cookies for a long period of time. And for file uploads, I don't recognize currently. But at Ajax, I have to change something. And at form, HTML. We have to declare something for uploading files. Next, my SQL join. I know it. Inner join means two tables... common fields will come. Left and right where both are same. Left join means first tables or all column plus both table, common columns will come. Store procedure, I know. Thing is, store procedure is faster than in line query. Second is we usually write our similar type tasks in stroboscope here. In case a hotel ERP system for checking the availability they use, usually using the strob procedure where the parameter is the date. Rest, the hotel availability will come from the DB. So here in this case, we have to write stroboscope here as this is faster than in line query. So it... that is a REST API I can't build in Core PHP from scratch. At Core PHP, what I did that usually Usually post and get the Stu method via Ajax, I did that. Uh, for example, if I have a web page, what I did in core my code PHP, I have my own framework. So means where I learn from, they used... we used to pass... to create... for example, think like we have to create a student list page. So what we did is train dot PHP student underscore at b h p student underscore list php. In this slippage, we did all the thing. So what I did, uh, via Ajax, I first displayed that page. In this page, list is there, and on top right side, uh, add button. When we create ad, the bootstrap pop up for jQuery model will open for adding a student where list is automatically called after ad. So student list there. They will be searching filter. So like that, uh, that much I know in my core PHP, and we can easily do the works. A lot of them write routing. Next question. A lot of them routing, I know. Middleware, I know. So... but currently not recognizing. An elephant ORM, I have problem with that. Like, I did not do it. I don't know the elephant URL totally. What I did using AI, I write the code on my own. For debugging, I first write the code in my SQL. Later on, I just convert it in the eloquent ORM. for eloquent, what I know that that is secure, database injection... skill injection will not be... will be prevented there. We... when we're using this and much more security provides. Okay. Git basics add I know. So Git in it, we initialize a git project. Git commit push. I know. First, our local changes, we have to commit, then push it, and branch for some special features for life. Uh, at our project, we have phase phase two development. So phase two Create a branch for that. So, uh, usually, what I did, I used fork, uh, git tool. It helps me a lot, uh, at my current project. We have two, uh, same git. We have a staging server and production server. So whatever changes we did in our local after pushing it, we get

using git pull at our staging, check... after check if it is okay, then add server. We usually pull it. So that's... I know. JQuery, Alex call. Yes. I know. But I have to see the Google. So, basically, what I did, uh, Google or just create a function where it checks, and then we did it. Yeah. Crowd operation, what I told you earlier, uh, what I can do without AI. That is totally fine. I need time for that, but I do it in core PHP. At level, we have to... I have to see something. So whatever I tell you, currently, you give me my score and tell me where I am currently at.

6/2/2026, 5:04:52 PM

Wow, that's a detailed honest answer! Here's your current score:

Your Skill Assessment:

Topic	Score	Verdict
PHP Sessions/Cookies	6/10	Okay — concept clear, gaps in cookies/file upload
MySQL Joins	7/10	Good — logic is right, wording needs polish
Stored Procedures	8/10	Strong — real example from project, impressive
REST API (Core PHP)	4/10	Weak — you did AJAX-based PHP, not true REST API
Laravel Routing/Middleware	6/10	Okay — know it but not confident without AI
Eloquent ORM	4/10	Weak — AI-assisted, not independent
Git	7/10	Good — real staging/production experience
jQuery AJAX	6/10	Okay — works but needs Google
CRUD without AI	7/10	Good — Core PHP CRUD you can do independently

Overall: ~6/10 — Solid Junior-Mid level

My honest verdict:

✅ Your **Core PHP + MySQL + Git + Stored Procedures** are genuinely good and interview-worthy right now.

⚠️ Your **REST API and Eloquent** are the two biggest gaps that WILL be asked in interviews.

🎯 These two alone can make or break your hike target.

In 6 days, focus ONLY on:

1. Build one real REST API in Core PHP — no framework
2. Learn Eloquent basics — 4-5 most used methods
3. Polish your CRUD project

Want me to now build your day-by-day 6-day roadmap? I'll keep it realistic — not overwhelming. 💪

6/2/2026, 5:05:03 PM

yup

6/2/2026, 5:05:49 PM

Here's your **6-Day Battle Plan**:

Day 1 — REST API in Core PHP (Most Important)

Goal: Build a simple Student REST API from scratch

Learn these 4 things only:

- What is REST API — GET, POST, PUT, DELETE
- How to read `$_SERVER['REQUEST_METHOD']`
- How to return JSON response using `json_encode()`
- Connect MySQL and return data as JSON

Mini Project: Build Student CRUD REST API in Core PHP

No framework. Just pure PHP + MySQL + Postman to test.

Day 2 — Eloquent ORM Basics (Laravel)

Goal: Stop depending on AI for Eloquent

Learn only these methods:

- `all()`, `find()`, `where()`, `first()`
- `create()`, `update()`, `delete()`
- One relationship only — `hasMany` / `belongsTo`

Practice: Convert your Core PHP Student API to Laravel + Eloquent

Day 3 — Build One Full Project (Core PHP)

Goal: One complete project WITHOUT AI

Build a **Simple Inventory System**:

- Add/Edit/Delete Product
- Stock in/out
- MySQL database
- jQuery AJAX (no page reload)
- Bootstrap UI (basic)

This becomes your **portfolio project** to show in interviews.

Day 4 — Laravel Mini Project

Goal: One Laravel project to show you know it

Build a **Task Manager API**:

- Laravel routing
- Middleware (auth basic)
- Eloquent CRUD
- REST API endpoints
- Test with Postman

Even if you use a little AI help — that's okay. But understand every line.

Day 5 — Interview Preparation

Goal: Don't get caught off guard

Practice answers for these most asked questions:

PHP:

- What is the difference between `include` and `require`?
- What are PHP sessions vs cookies?
- What is MVC?

MySQL:

- Difference between `INNER JOIN` and `LEFT JOIN`
- What is a stored procedure and why use it?

- What is indexing?

Laravel:

- What is Eloquent ORM?
- What is middleware?
- Laravel request lifecycle

General:

- Explain one project you built end to end
- How do you debug a production issue?

Day 6 — Resume + Apply + Rest

Goal: Get applications out and relax your brain

- Update resume to highlight **Core PHP, MySQL, Stored Procedures, REST API, Git**
- Don't oversell Laravel — say "working knowledge"
- Apply to 15–20 companies in Kolkata + Bangalore
- Keep your Inventory System project on GitHub — share link in resume

Salary Strategy:

City	What to Ask	What to Accept
Kolkata	₹40k	₹35k minimum
Bangalore	₹55k	₹45k minimum

Never reveal ₹25k first. If asked current CTC say:

"I am looking for ₹40,000–₹45,000 based on role and growth."

One rule for all 6 days:

*Build something every day. Even small. Interviewers don't care what you know — they care what you've **built**.*

Want me to start with **Day 1 — REST API tutorial** right now? I'll write the exact code with explanation so you can start tonight. 💪

6/2/2026, 5:06:09 PM

first rate my resume meanwhile I have to apply to kolkata based company and bangalore

So listdown company names good for me and apply link

So I will one excel one tab for kolkata and another for bangalore

6/2/2026, 5:11:06 PM

Let me do both together!

Resume Rating: 7.2 / 10

What's good

- Clean structure, easy to read
- Real project names with tech stack mentioned
- Good DGPA (8.88) — worth keeping
- International project (Yippee Malta) — strong point
- Achievements section is solid

What needs fixing

- "Laravel & Vue.js" is prominent but you said Vue was AI-assisted — risky if they ask deep
- No GitHub link — big miss for developers
- No portfolio/project links
- Summary is too long and generic
- Skills section lists too many things — makes you look like you're bluffing
- "ASP.NET Web API (training)" — remove this, it adds confusion

Now let me search real companies for you!

Searched the web 

PHP Laravel developer jobs Kolkata 2026 hiring companies

- 🌐 PHP Core PHP developer jobs Bangalore 2026 hiring companies apply
- ✓ Done

Now let me build your Excel file with both tabs!

Viewed file, ran 2 commands, edited file, presented file ▾

- 📄 Check xlsx skill
- 📄 Create job tracker Excel with Kolkata and Bangalore tabs
- ✍ Editing file
- 📄 Fix font assignment and run
- 📄 Presenting file(s)...
- ✓ Done

Here's your Job Tracker! 🎯

What's inside:

📄 **Instructions tab** — salary strategy reminder, status guide

🌐 **Kolkata tab** — 15 companies including Zodray Tech, Dreamztech, Affinity Infosoft, CyberSWIFT, Xigmapro, and more with direct apply links

🌐 **Bangalore tab** — 10 companies including FugenX, Turing (remote option!), Wellfound startups, Naukri listings and more

How to use it:

- Update the **Status** column as you apply — Not Applied → Applied → Interview → Rejected
- The **Turing** listing in Bangalore is worth checking — they hire remote, so no relocation needed but Bangalore-level pay

Next steps for today:

1. Start applying from the Kolkata tab first (easier, no relocation cost)
2. Parallely work on **Day 1 of the roadmap** — REST API in Core PHP

Want me to start the Day 1 coding tutorial now? 💪

6/2/2026, 5:12:22 PM

not any link working

do a thing first I want to do a bulk cold email to all HRS of these companies from my email with attached my resume is it possible for u get the hr email from anywhere

6/2/2026, 5:17:39 PM

Honest answer — I can't scrape or find private HR email addresses for specific companies. That's not publicly available data in a reliable way, and even if I searched, most would be wrong or outdated.

But here's what actually works better:

Option 1 — LinkedIn (Best for Bangalore)

- Search "[Company Name] HR Recruiter Kolkata" on LinkedIn
- Send a connection request + short note
- Many HRs respond faster on LinkedIn than email

Option 2 — Naukri / Indeed (Easiest)

- These portals let you apply directly to all these companies
- One profile, bulk apply in 1 hour
- HRs actively check these

Option 3 — Cold Email (Where it's findable)

- Some companies list HR emails on their website under "Careers" or "Contact"
- Pattern is usually `hr@companyname.com` or `careers@companyname.com`
- For example you already have `hr.techscooper@gmail.com`

My suggestion for your 6 days:

Don't spend time hunting emails. Instead:

1. **Today** → Upload resume on **Naukri + LinkedIn + Indeed** — set job alerts for "PHP Developer Kolkata" and "PHP Developer Bangalore"
2. **Bulk apply** on Naukri — you can apply to 50+ jobs in one sitting
3. **Cold email** only where HR email is clearly listed on their website

Want me to write you a **killer Naukri/LinkedIn profile summary** instead? That will get HRs coming to YOU.
That's more powerful than cold emails. 💪

6/2/2026, 5:17:50 PM

Bulk apply on Naukri — you can apply to 50+ jobs in one sitting
how to do this

6/2/2026, 5:18:23 PM

Here's exactly how to bulk apply on Naukri:

Step 1 — Setup Your Profile First (30 mins)

Go to **naukri.com** → Create account or login

Fill these completely:

- Upload your latest resume
- Current CTC → put **₹3,00,000** (that's your ₹25k/month annual)
- Expected CTC → put **₹4,80,000** (₹40k/month — don't go lower)
- Notice Period → select whatever days you have left
- Current Location → Malda / Siliguri
- Preferred Location → **Kolkata, Bangalore**
- Key Skills → PHP, Laravel, MySQL, Core PHP, jQuery, REST API, Git

Step 2 — Search Smart

Search these one by one:

Search Term	Location
PHP Developer	Kolkata
Laravel Developer	Kolkata
Core PHP Developer	Kolkata
PHP Developer	Bangalore
Laravel Developer	Bangalore

Search Term	Location
Backend PHP Developer	Bangalore

Step 3 — Bulk Apply

- On search results page you'll see a checkbox on each job card
-  Tick multiple jobs at once
- Click **"Apply Selected"** button at top
- Naukri auto-fills your profile and applies to all selected

Do this for each search term — you can apply to 50–100 jobs in one sitting easily.

Step 4 — Also Do This

Indeed → indeed.co.in — same process, upload resume, apply with one click

LinkedIn Easy Apply → linkedin.com → search PHP Developer → filter **Easy Apply** → these apply in one click with your LinkedIn profile

One Important Thing

After applying on Naukri, go to:

My Naukri → **My Applications**

You'll see all jobs you applied to. Copy the company names into your Excel tracker and mark status as **"Applied"**

Do you have a Naukri account already or starting fresh?

6/2/2026, 5:18:35 PM

LET'S READ FIRST
WHAT WE DO
FIRST CLEAR ALL CONCENPTS TOMORROW WILL FINISH ALL PRACTICAL
SO LEARNING IS VITAL AND IMPORTANT
SO WHAT WE CAN DO
CREATE A STUDY MATERIAL FOR ME
DIAGRAM FLOWCHART FOR UNDERSTAND EACH TOPICS CLEARLY
FORGET WHAT I KNOW WHAT I DON'T KNOW
WHAT I SHOILD KNOW FOR THE INTERVIEW THAT IS IMPORTANT
SO WHAT IS UR TASK
PREPARE THE SYUDY MATERIAL
WITH EXAMPLE ,DIAGRAM,FLOWCHART EACH TOPIC SO I WOULD ASK U
SECOND TIME THAT I DIDNOT UNDERSTAND THIS

6/2/2026, 5:28:46 PM

Great decision! Theory first, then practical tomorrow. Smart approach. 🎯

Let's do this properly. Here are all the topics you need to master for a PHP Developer interview:

The Complete Topic List:

1. 🟦 PHP Core Concepts — Sessions, Cookies, File Upload, OOP basics
2. 🟦 REST API — What it is, how it works, HTTP methods
3. 🟦 MySQL — Joins, Stored Procedures, Indexing
4. 🟦 Laravel — Routing, Middleware, Eloquent ORM, Request Lifecycle
5. 🟦 MVC Architecture — What, Why, How
6. 🟦 Git — Workflow, commands, branching
7. 🟦 AJAX + jQuery — How it connects frontend to backend
8. 🟦 Security — SQL Injection, XSS basics

One topic at a time — deep and clear.

Which one do you want to start with?

6/2/2026, 5:28:53 PM

Q: Which topic do you want to start with first?

A: gIVE ME ALL

6/2/2026, 5:29:15 PM

Perfect! Let's build your complete study material. This will take a moment — I'm building everything with diagrams and flowcharts. 🔥

Now let me build your complete interactive study material!

Tap a topic to study. Each section has concept explanation, diagram, code example, and interview Q&A.

MVC

REST API

PHP Core

MySQL

Laravel

Git

AJAX + jQuery

Security

Start here — asked in every interview

MVC Architecture

MVC splits your application into 3 parts so code doesn't become a spaghetti mess. Think of it like a restaurant.

Model

Talks to the database. Gets data, saves data.
Nothing else.

View

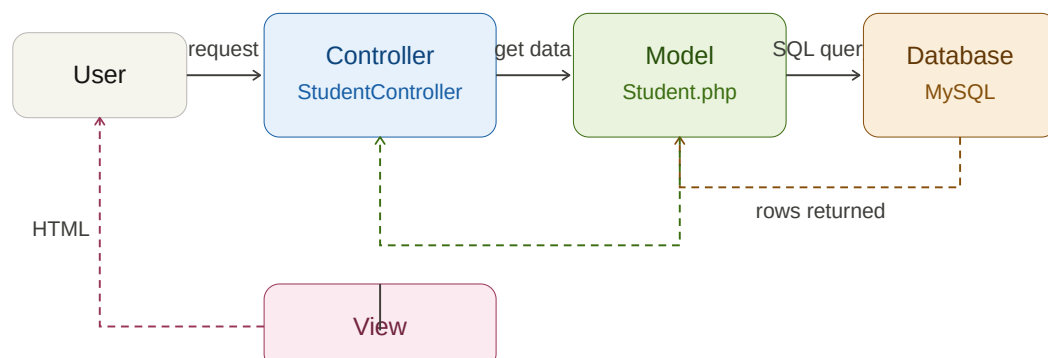

What the user sees. HTML templates. Zero
business logic.

Controller

The brain. Receives user request → asks Model for data → sends to View. It's the middleman.

Flow diagram — what happens when user visits /students

Answer this in interview:

What is MVC and why do we use it? ▼

In your Hotel ERP, how did you use MVC? ▼

Here's your complete study guide! 🔥

How to use it:

- Tap each topic tab — MVC, REST API, PHP Core, MySQL, Laravel, Git, AJAX, Security
- Every section has a diagram, code example, and interview Q&A (tap questions to reveal answers)
- The Q&A answers are written exactly how you should speak them in an interview

Study order for today:

1. MVC first — foundation of everything
2. REST API — most asked
3. MySQL — your strength, just polish it
4. Laravel — concepts only, be honest about depth
5. PHP Core, Git, AJAX, Security — revise quickly

Tomorrow we build the practical projects. Deal? 💪

6/2/2026, 5:32:41 PM

I NEED PDF OR IN GOOD HTML

6/2/2026, 5:34:26 PM
